

Conditional Evidence — Bangdream Playlist Maker

Project: bandori-playlist-maker

Homepage: <https://sbb2002.github.io/bandori-playlist-maker/>

Privacy Policy: <https://sbb2002.github.io/bandori-playlist-maker/privacy.html>

Terms of Service: <https://sbb2002.github.io/bandori-playlist-maker/terms.html>

Use case: Website & Mobile App | **OAuth:** Yes

This project matches **two** of the conditional requirements, so both are included in this single document.

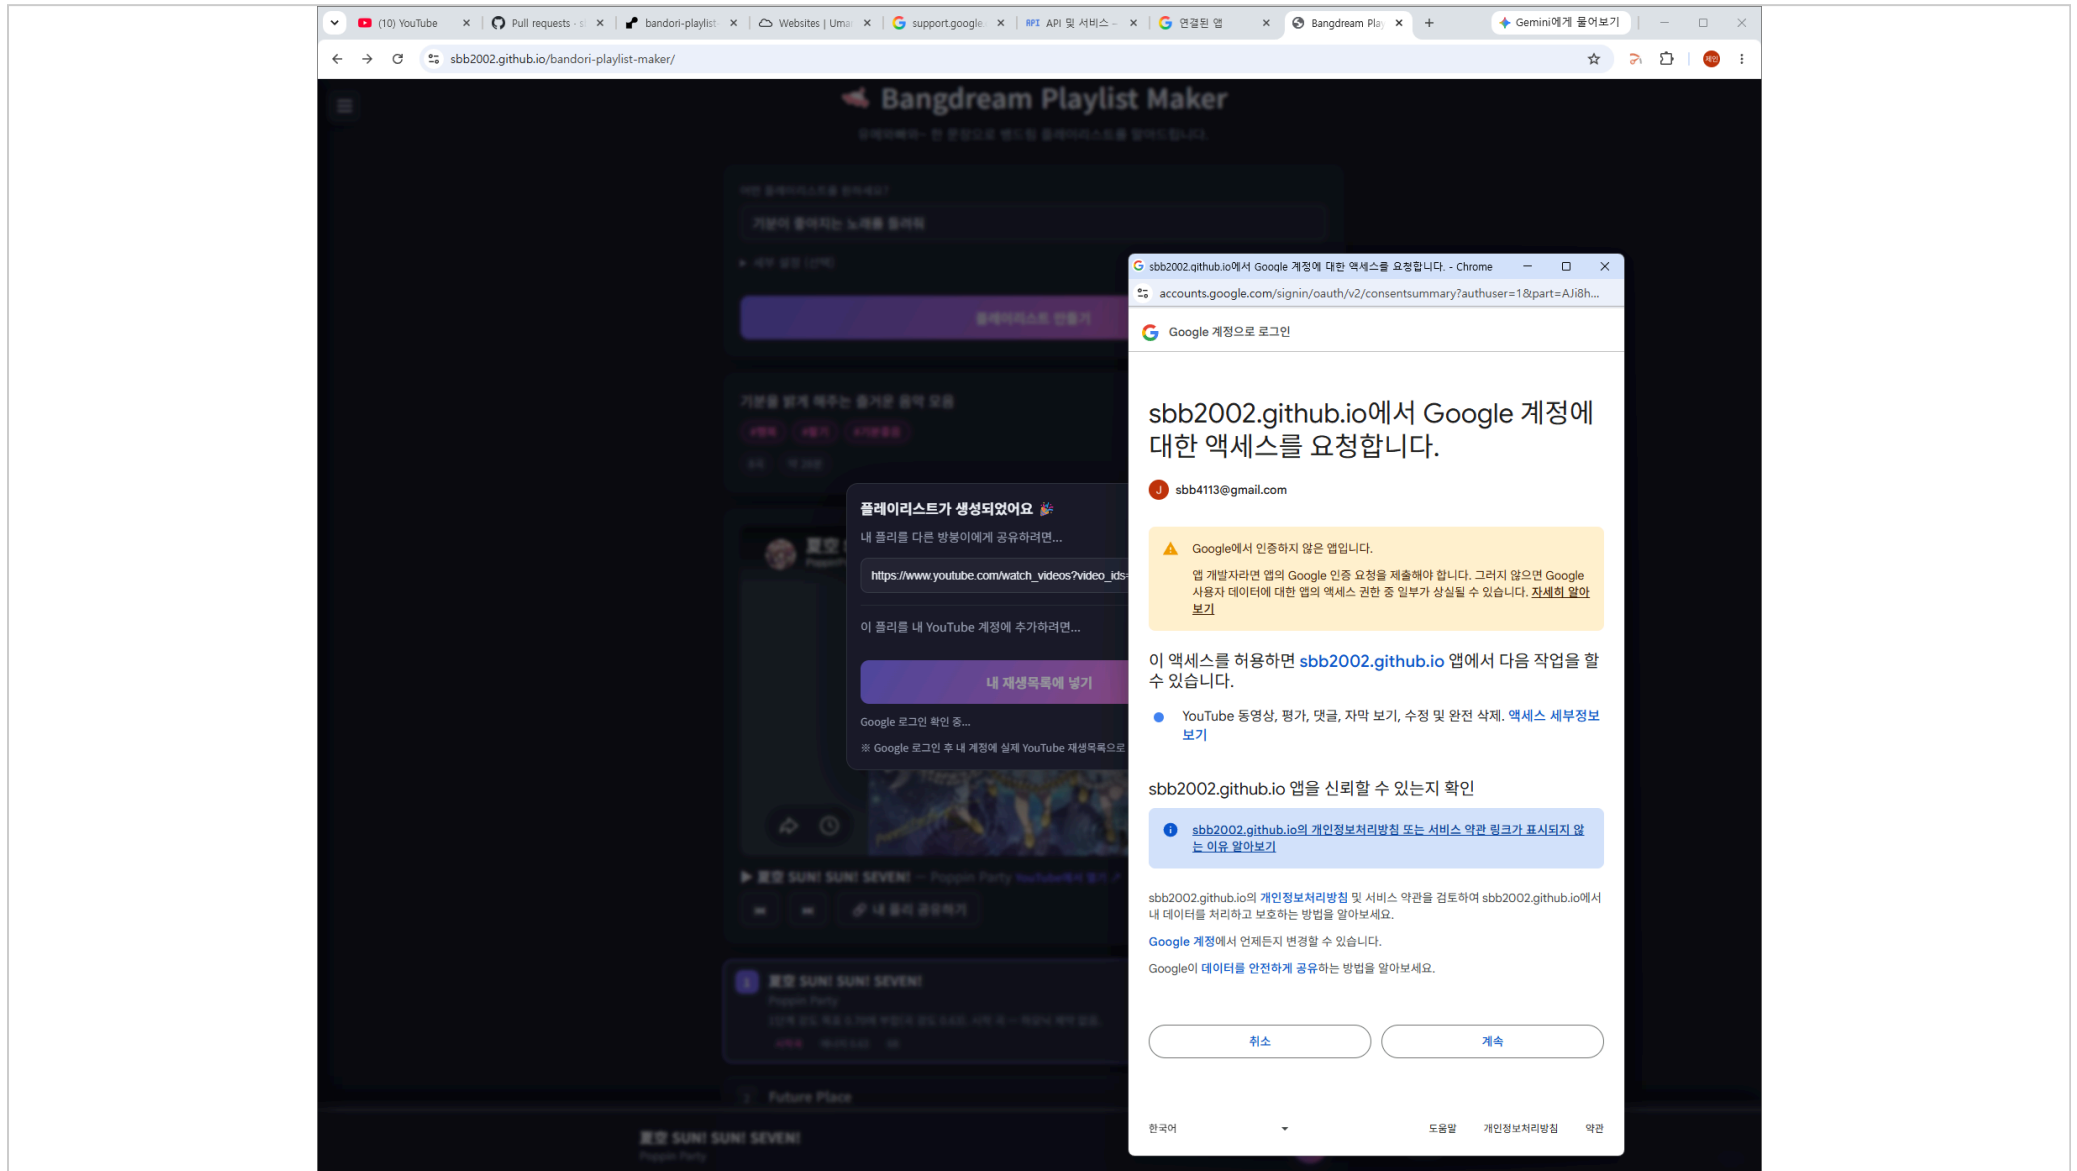

Requirement	Applies	Included
a) OAuth flow — consent, scopes, revocation	Yes (OAuth = Yes)	Pages 2–4
b) Upload interface	No	The app never uploads videos or manages accounts.
c) Player / embed	Yes (Website & Mobile App)	Page 5
d) Dashboard / feature	No	Not an internal tool or analytics product.

Scope requested: `https://www.googleapis.com/auth/youtube.force-ssl` (one scope only).

API methods used: `playlists.insert`, `playlistItems.insert`. No `search.list`, no read/list calls.

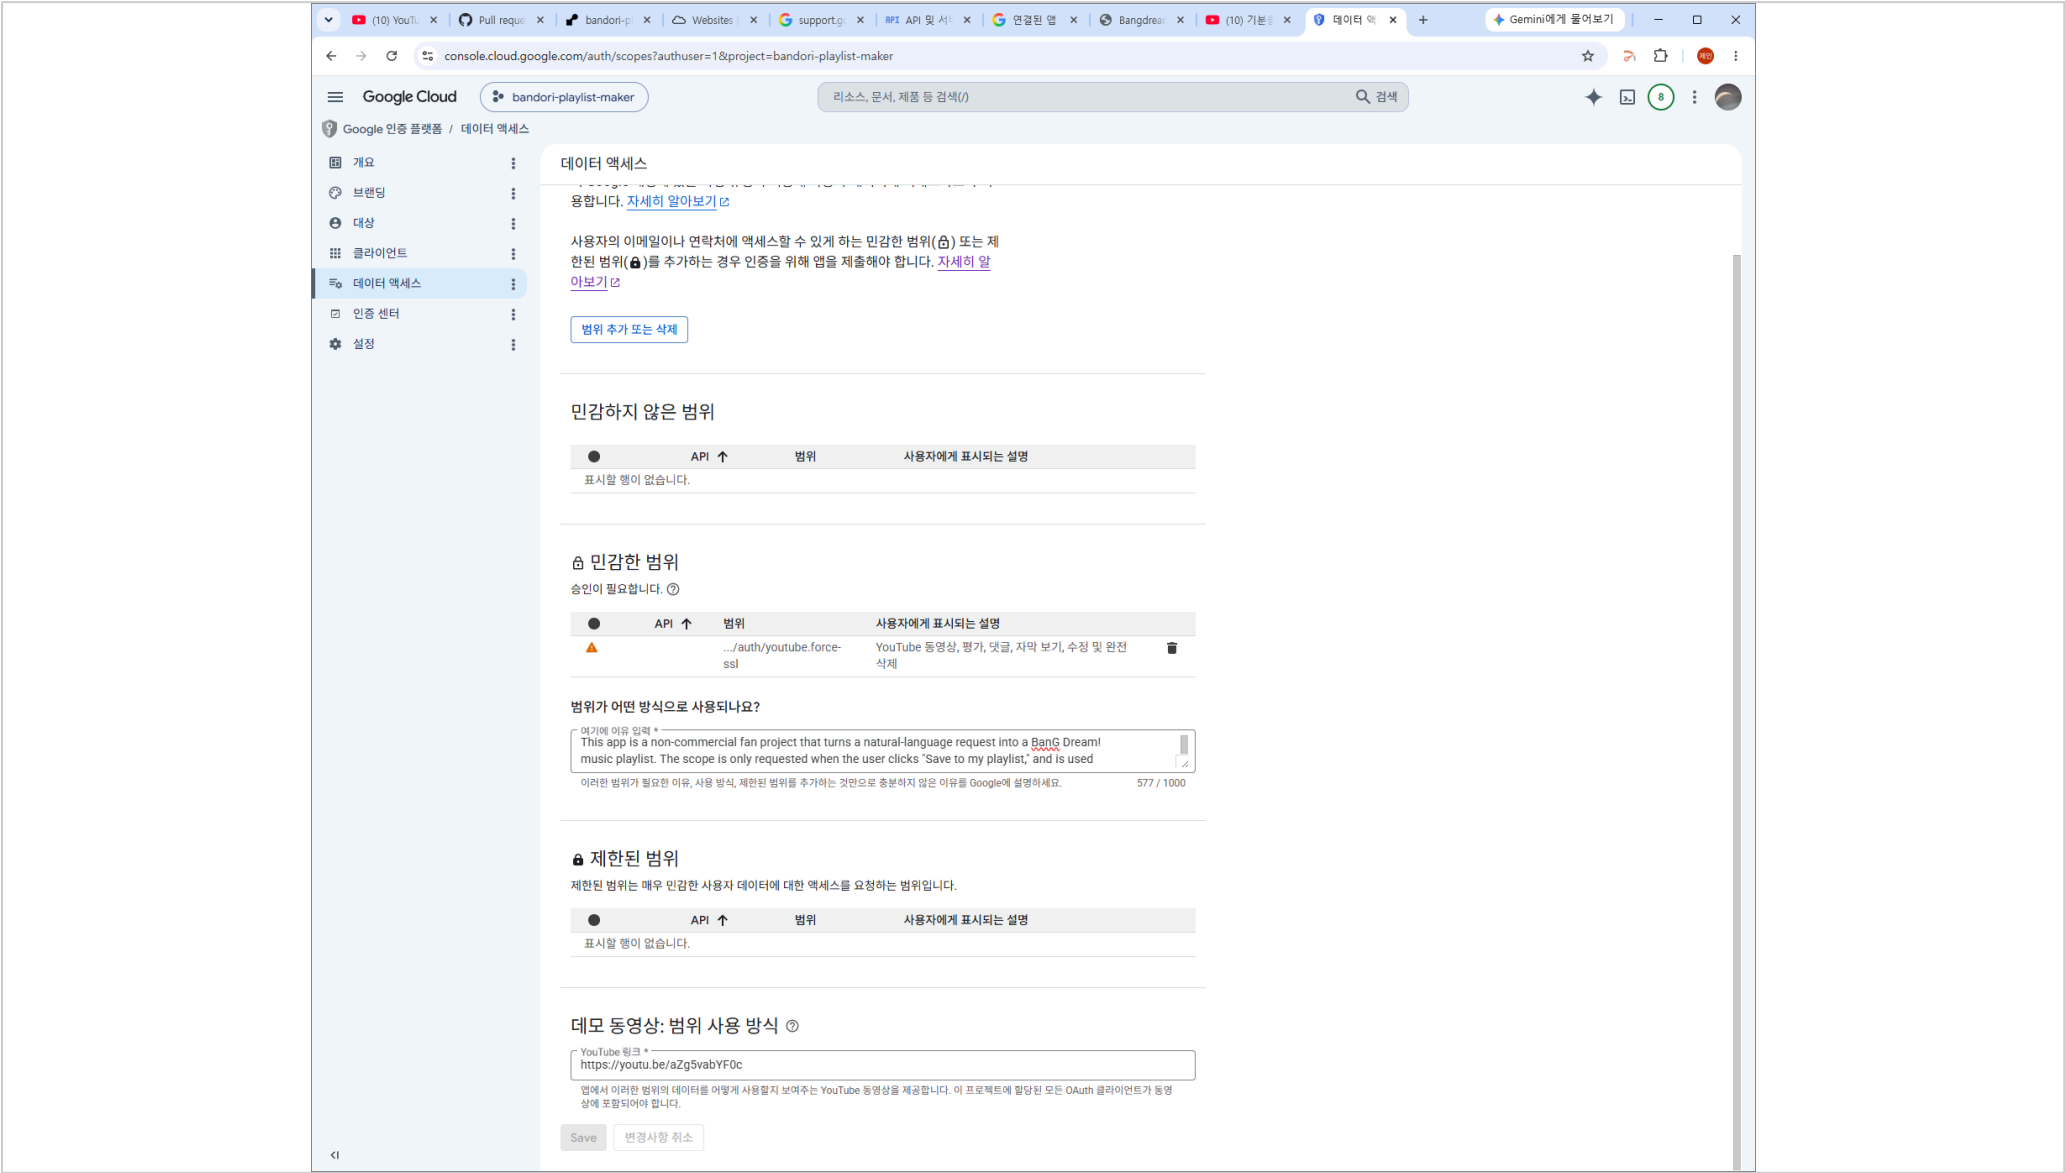

a) OAuth Flow — Consent Screen (동의 화면)

User clicks “Save to my playlist” on the live site (sbb2002.github.io/bandori-playlist-maker/). The Google consent screen appears and displays the requested scope. The “unverified app” notice is expected: OAuth verification for this app is currently under review.

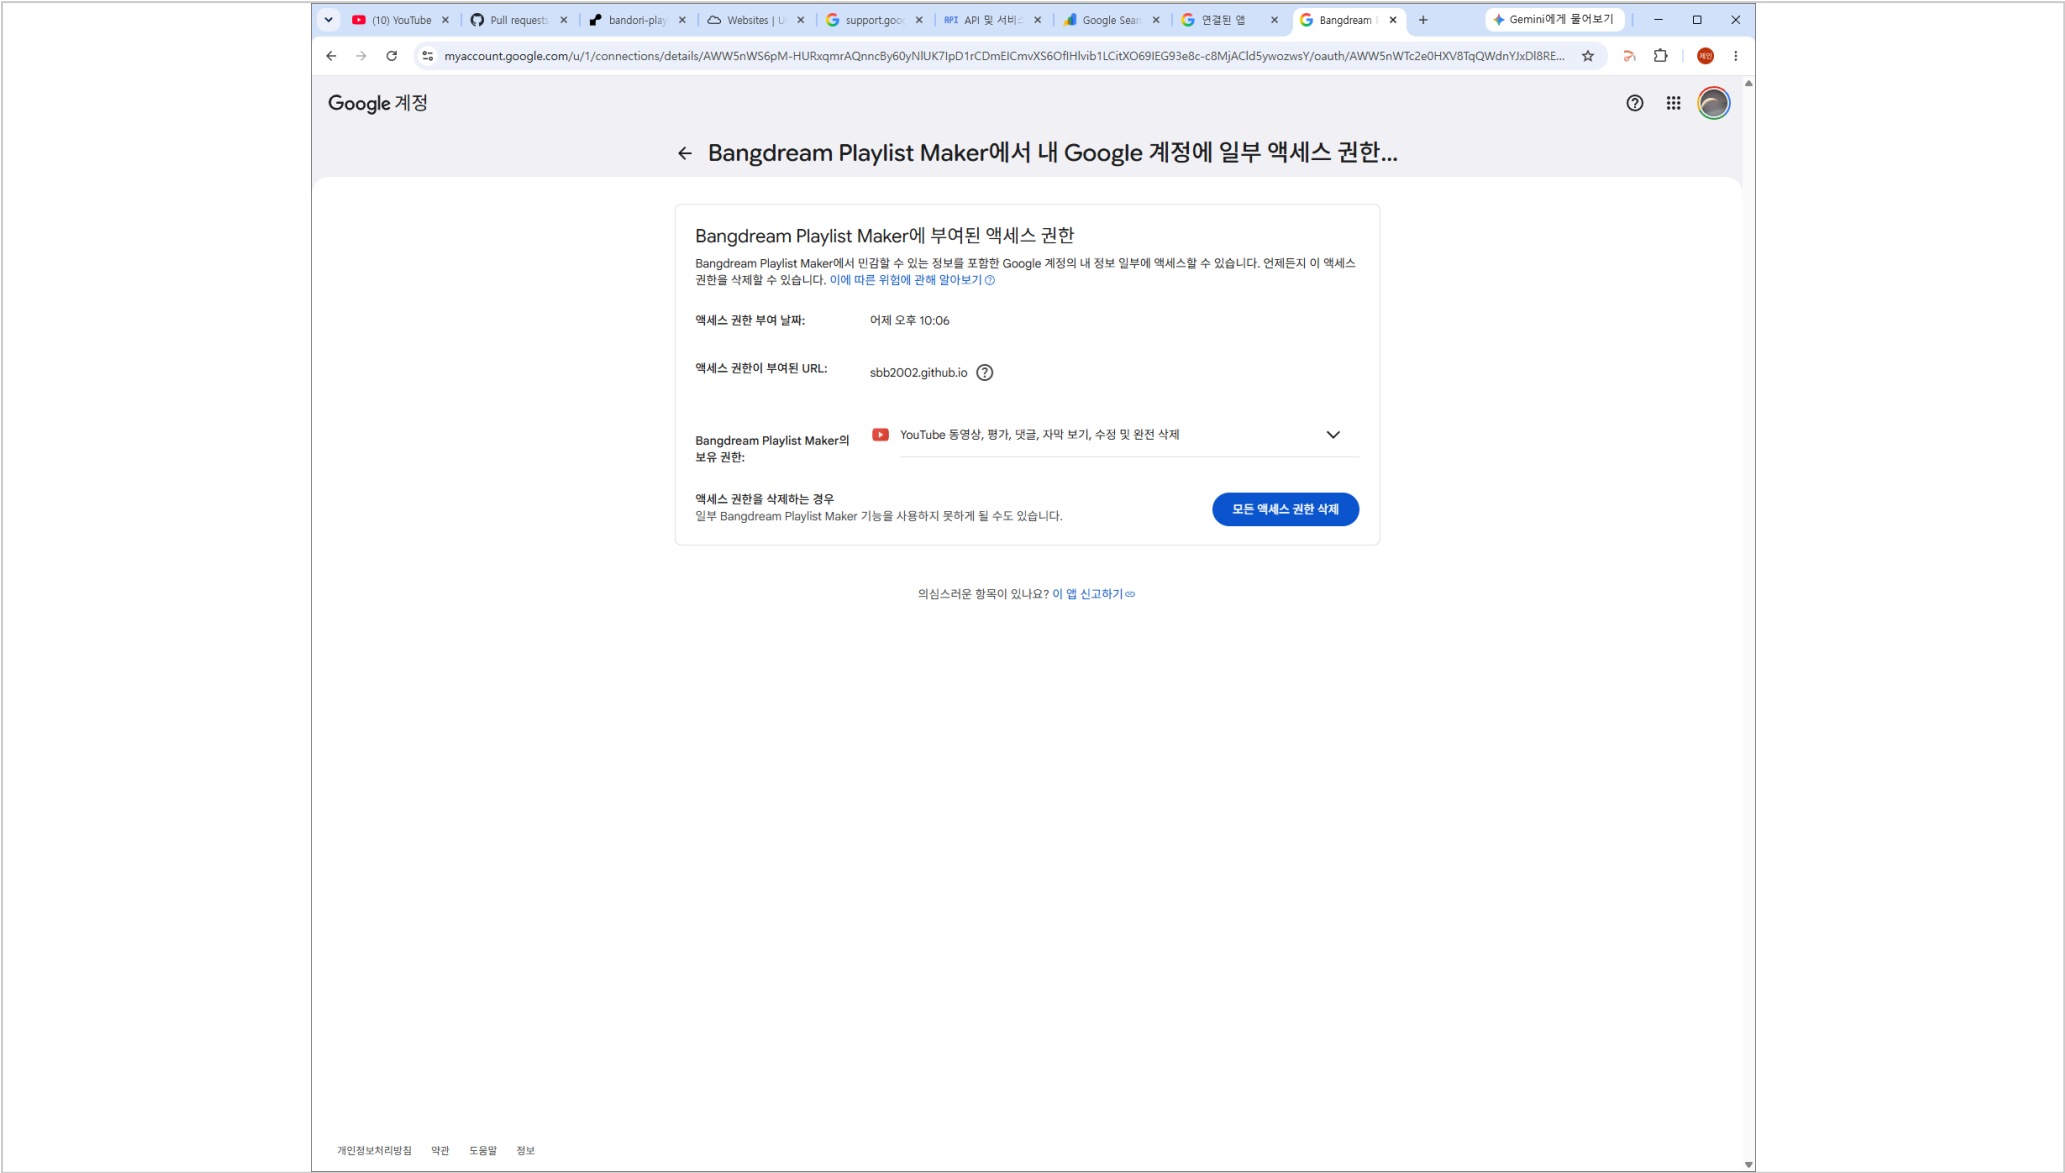

a) OAuth Flow — Requested Scopes (요청 범위)

Google Cloud Console → Data Access. The app requests exactly one sensitive scope: `https://www.googleapis.com/auth/youtube.force-ssl` — used solely to create a playlist and insert songs into the user’s own YouTube account. No non-sensitive or restricted scopes are requested.

a) OAuth Flow — Revocation (권한 철회)

Google Account → Third-party apps & services → “Bangdream Playlist Maker”. Users can revoke the app’s access at any time via “Remove all access”. This link is also published in our Privacy Policy.

c) Player / Embed — YouTube IFrame Player (임베드 플레이어)

Use case: Website & Mobile App. All playback happens through YouTube's official embedded IFrame player (YouTube branding, title and controls visible). The service never hosts, stores, or distributes any audio or video.
