

Other Supporting Materials

API call inventory, quota arithmetic, and compliance references.

1. Complete API call inventory

Endpoint	Cost	When called	Purpose
playlists.insert	50	Once per "Save" click	Create an unlisted playlist in the signed-in user's own account.
playlistItems.insert	50 × N	N times per "Save" click	Insert each song in order. No batch endpoint exists, so calls are sequential.
search.list	—	Never	Not used. Song metadata comes from our own curated dataset (songs_master.csv).
videos.insert	—	Never	Not used. The app never uploads video.
Any read / list method	—	Never	Not used. No channel, subscription, or video metadata is ever read.
YouTube IFrame Player	0	Every playback	Official embed. Not part of the Data API and consumes no quota.

2. Quota arithmetic — cost of one save

Playlist length (user-selectable, 10–180 min)	Songs	Units per save	Saves possible on the 10,000/day default
30 minutes	~8	450	22
60 minutes (default)	~17	900	11
90 minutes	~25	1,300	7
180 minutes (maximum)	~50	2,550	3

The daily quota is shared by **all users of the project**, not per user. One user creating a single 180-minute playlist consumes roughly a quarter of the entire day's default quota, after which every other user is denied for the rest of the day. This is the core reason for our request.

3. Data handling & compliance

- **No YouTube user data is stored on any server.** The OAuth access token lives only in browser memory and is destroyed on refresh/close. No refresh tokens are requested or stored.
- API calls go **directly from the user's browser to Google**; our backend never sees the token.
- Playlists are created as `unlisted` and belong solely to the user, who can delete them at [youtube.com/feed/playlists](https://www.youtube.com/feed/playlists) and revoke access at myaccount.google.com/permissions.
- No audio or video is hosted, stored, downloaded, extracted, or redistributed. Playback is exclusively through the official IFrame player.
- Privacy Policy: <https://sbb2002.github.io/bandori-playlist-maker/privacy.html>
- Terms of Service: <https://sbb2002.github.io/bandori-playlist-maker/terms.html>
- Both documents link to the YouTube Terms of Service and the Google Privacy Policy, and the homepage displays a YouTube API Services notice next to those links.
